- The Main Application is the "*Bank.class*" File. So, run that file to check-in to the Banking System.

- Explore all the Menu's of the Menu-Bar, and all the options of the Tool-Bar, to get along well with the system.

- Try to use short-cuts, for more (repeated) work, in the particular Window(s).

- When there is an open window in the Background, placed at its initial position and you click to open another window, the new (other) window has been opened, behind the back of the current window. So, move the current window in the Frame anywhere to use both the windows, simultaneously.

- Use Valid Dates, wherever required/asked.

- You can try switching "Themes" and "Background Colour" of the System, for more user-friendly and fun experience, while working on the System.

- Don't try to save the PDF of the "Print Customer Report" file, when the "Print" Dialog Box appears. Because, the system won't create a PDF File, if requested and hence, can lead to a lag or error in the System. Though, you can directly print the "Customer Balance Report".

- Have a great time using the system, and we hope you won't have any difficulty, using the System.
